

Atlantic Large Whale Take Reduction Plan Changes for Lobster and Jonah Crab Fisheries

The following changes have been made to the Atlantic Large Whale Take Reduction Plan (Plan) as of August 2021. All Plan requirements not listed here remain in place and should continue to be adhered to.

CHANGES TO LOBSTER AND JONAH CRAB TRAP/POT CLOSURE AREAS

EFFECTIVE OCTOBER 18, 2021

All new and existing closures are modified from restricting all trap/pot fishing to only restricting trap/pot fishing that uses persistent (traditional) buoy lines, except for federal waters in the Outer Cape Lobster Management Area (LMA), which remains closed consistent with the Atlantic States Marine Fisheries Commission (ASMFC) American lobster Interstate Fishery Management Plan. Gear that does not use persistent buoy lines, such as “ropeless” gear that retrieves trap/pot trawls when the vessel is on-site, is now allowed in these areas for research purposes with appropriate state and federal permits (see below).

EXEMPTED FISHING PERMITS

Exempted Fishing Permits (EFPs) are issued for activities in support of fisheries-related research. There are studies underway to develop fishing methods that do not use buoy lines to retrieve gear and alert other fishermen to the presence of gear on the bottom. Results of this work would enable the fishing industry to operate in areas where persistent buoy lines are prohibited. To participate in this research, federally permitted vessels must operate under EFPs.

If you are interested in testing ropeless gear or have another idea for research related to reducing the use of persistent buoy lines, please contact your NOAA Fisheries regional office. You may also need to obtain authorization from the state that issues your fishing permit.

CHANGES TO LOBSTER AND JONAH CRAB TRAP/POT WEAK INSERTS

EFFECTIVE MAY 1, 2022

The 2021 rule removes the requirement for weak link at buoys* and other surface system flotation devices, and adds requirements for weak rope or insertions within the buoy line.

The following table represents the lobster and Jonah crab trap/pot management areas where changes have been made to weak inserts. Requirements for all other areas, other trap/pot fisheries, and gillnet fisheries remain the same.

Visit fisheries.noaa.gov/alwtrp for complete regulations.

*Weak links at the buoy may still be used voluntarily.

AREA	WEAK INSERTION REQUIREMENTS
ME Exempt State Waters	1 weak insert 50% down the line OR top 50% of buoy line weak rope.
ME Exempt Line-3 nm	
NH State Waters	
MA State Waters	Weak inserts every 60 feet OR full weak line in the top 75% of line.
RI State Waters	
LMA 2	
ME Zone A West, B, C, D, E; federal waters 3-12 nm	2 weak inserts at 25% and 50% down the line OR top 50% of buoy line weak rope.
MA and NH LMA 1, OCC; federal waters 3-12 nm	
ME Zone A East, F, and G; federal waters 3-12 nm	1 weak insert 33% down the line.
LMA 1 & OCC beyond 12 nm	
LMA 3	Top 75% of one buoy line is full weak line. Bottom 25% can be higher strength.

EXAMPLES OF WEAK INSERT RIGGING METHODS

USED WITH WEAK ROPE

The red rope in these pictures is weak rope manufactured by Rocky Mount Cord Company. Rocky Mount Candycane is also approved for use.

NO WEAK ROPE USED

This red sleeve is manufactured by Novabraid.

Check fisheries.noaa.gov/alwtrp for more approved weak insert rigging methods.
